

ITT Conoflow Announces Enhanced Positioner Design

To provide a cost advantage in markets that utilize our Positioners and Actuators, we are Upgrading to a machined body. This will include both the "J-Series" and the Commandaire Positioners.

This upgrade from the cast body will provide several enhancements. These include; Competitive pricing, reduced lead times, and greater quality control.

Due to the machining process, the new body will have a different appearance. However, the functionality, port dimensions and all other assembly components will remain the same. With precise machining capabilities, the weight gain of this machined body will be held to less than ½ of a pound (0.2 kg).

Conoflow's goal is to continue to upgrade and improve its product offering wherever possible. We look forward to meeting or exceeding our customer's expectations in all the products we manufacture.
